

AGENCYOS

PHASE 4 - FINANCE AGENT

M2 = 20% Milestone Finance Control

RESPONSIBILITIES + INVOICE + PAYMENT COLLECTION + ADMIN VERIFICATION GATE + IMPLEMENTATION + TESTING

Official Role	Finance Agent
Lifecycle Position	Cross-phase Finance Agent; this document defines its Phase 4 / M2 activation
Activation Trigger	Phase4Completed / Task 2 Complete
Mandatory Milestone	M2 = 20% of accepted commercial baseline, subject to configured tax/terms
Primary Mission	Create and manage the correct M2 financial workflow, request payment, track evidence, prepare verification context, and keep Phase 5 financially gated
Final Payment Authority	Admin human verification only under the locked AgencyOS milestone flow
Hard Rule	Payment proof / client message / screenshot ≠ verified payment
Phase 5 Gate	Only M2PaymentVerified opens the financial gate for Task 3 / Phase 5

This document applies the Finance, Invoice, Payment & Milestone master rules to the locked Phase 4 flow. Where the master finance document allows Finance/Admin verification, the newer locked AgencyOS project flow used here keeps final payable-payment verification with the human Admin.

1. Finance Agent Mission

The Phase 4 Finance Agent is the financial control layer between successful Task 2 completion and Phase 5 development. It creates or activates the mandatory M2 milestone, generates the invoice/payment request from the accepted commercial baseline, sends/records payment instructions, tracks payment submission, validates evidence for matching and exceptions, prepares an Admin verification package, and publishes the verified gate only after Admin approval.

Finance Agent manages the financial workflow; it does not become the human financial authority. It must never mark M2 paid merely because the client says 'paid' or uploads proof.

2. Cross-Phase Milestone Context

Milestone	Trigger	Percentage	Financial gate
M1	Phase 2 onboarding / project kickoff conditions	30%	Project progression according to locked Phase 2 flow after Admin verification
M2	Phase 4 complete - Full UI + Prototype approved	20%	Phase 5 cannot start until Admin verifies M2
M3	Phase 5 full development complete	30%	Next locked lifecycle progression after Admin verification
M4	Phase 6 Master QA complete	20%	Production launch/handover progression after Admin verification

This document implements only the M2 behavior while preserving the global 30/20/30/20 milestone structure.

3. Phase 4 Finance Activation Conditions

- ☐ Task 2 / Phase 4 has reached a valid COMPLETED state.
- ☐ Final client-approved prototype build exists.
- ☐ Required Phase 4 DoD evidence exists.
- ☐ Accepted commercial baseline / quote version is known.
- ☐ Project milestone plan includes M2 = 20%.
- ☐ M2 has not already been invoiced/verified for the same project/commercial baseline.
- ☐ Client billing profile and GST/non-GST mode are known or explicit Finance/Admin clarification is created.
- ☐ A valid receiving/payment account configuration exists.

Duplicate/replayed Phase4Completed events must not create a second M2 invoice or second financial obligation.

4. Finance Agent Inputs

- ☐ organization_id / project_id / client_id.
- ☐ accepted quote/commercial baseline version.
- ☐ project total / milestone schedule.
- ☐ M2 milestone ID and configured percentage/amount.
- ☐ tax mode: GST / Non-GST / configured business profile.
- ☐ billing name/address/tax identifiers where applicable.
- ☐ configured invoice numbering policy.
- ☐ due terms / due date policy.
- ☐ active receiving account/payment method configuration.
- ☐ Phase4Completed event and completion evidence.
- ☐ client official communication destinations.
- ☐ existing invoices/payments to prevent duplicates.

5. Phase 4 Finance End-to-End Flow

PHASE 4 COMPLETE → FINANCE AGENT ACTIVATES M2 → VALIDATE COMMERCIAL BASELINE → CALCULATE M2 → BUILD GST/NON-GST INVOICE → ISSUE INVOICE → SEND PAYMENT REQUEST → PAYMENT_PENDING → CLIENT SUBMITS PAYMENT / PROOF → PAYMENT_SUBMITTED → FINANCE MATCHING / VALIDATION → PENDING_ADMIN_VERIFICATION → ADMIN VERIFY / REJECT → VERIFIED → RECEIPT / ACKNOWLEDGEMENT →

Operational completion and financial completion remain separate linked records. Phase 4 may be operationally complete while M2 is still unpaid/unverified.

6. M2 Calculation & Invoice Creation

- ☐ Derive M2 from the accepted commercial baseline, not from chat text.
- ☐ Default locked M2 percentage is 20% unless the governing accepted commercial record explicitly defines an approved exception.
- ☐ Use deterministic arithmetic for subtotal, discount, tax, total and balance.
- ☐ Do not hard-code GST rate inside agent reasoning; use configured tax policy.
- ☐ Create one unique invoice number according to agency configuration.
- ☐ Store issue date, due date, client/project, line item/milestone reference, subtotal, tax fields, total, payment instructions and balance.
- ☐ Persist commercial baseline version and milestone ID on invoice.
- ☐ If billing/tax data is ambiguous, route to Finance/Admin clarification rather than guessing.

7. GST / Non-GST Rules

- ☐ Support GST and Non-GST invoice modes.
- ☐ Tax/business profile is explicit and versioned/configured.
- ☐ Historical issued invoice retains the tax/payment configuration used at issue time.
- ☐ Tax calculation is deterministic and auditable.
- ☐ Do not invent GST applicability, place-of-supply logic or tax rate.
- ☐ Tax correction after invoice issue uses controlled amendment/credit-note path where applicable.
- ☐ Sensitive tax configuration is Admin/Finance-policy controlled.

8. Invoice Lifecycle

DRAFT → ISSUED → PAYMENT_PENDING → PARTIALLY_PAID / PAID / OVERDUE / VOID / CANCELLED / REFUNDED as applicable

State	Meaning in M2 context
DRAFT	Prepared but not yet official/client-facing
ISSUED	Official invoice created and issue history locked
PAYMENT_PENDING	Awaiting payment submission/collection
PARTIALLY_PAID	Verified amount is below invoice balance where partial payments are allowed
PAID	Verified payment(s) satisfy invoice balance
OVERDUE	Due date passed and verified balance remains
VOID / CANCELLED	Controlled cancellation; history retained
REFUNDED	Refund/adjustment path updated through auditable financial records

9. Payment Instruction Responsibilities

- ☐ Use only active configured receiving accounts.
- ☐ Support configured bank transfer, UPI ID, UPI QR and approved gateway methods.
- ☐ Invoice/payment request should include invoice/reference number.
- ☐ Historical invoice keeps payment instructions/version used when issued.
- ☐ Do not expose API secrets or unnecessary sensitive account data.
- ☐ Client-facing payment request should be clear, concise and tied to exact invoice/milestone.

10. Payment Submission Capture

- ☐ payment submission ID.
- ☐ invoice ID and M2 milestone ID.
- ☐ submitted amount.
- ☐ payment method.
- ☐ transaction/reference/UTR where applicable.
- ☐ payer name.
- ☐ payment date/time.
- ☐ receiving account selected/claimed.
- ☐ proof attachment if provided.
- ☐ submitted by and timestamp.
- ☐ initial status PENDING_VERIFICATION

Screenshot/proof is supplementary evidence. It is not sufficient by itself to mark the payment verified.

11. Finance Matching & Pre-Verification Validation

Match type	Finance Agent behavior
Exact match	Invoice + amount + reference + receiving account align; prepare Admin verification package
Partial payment	Record partial submission and remaining balance; route per policy
Underpayment	Flag discrepancy; do not auto-open gate
Overpayment	Flag excess; require controlled resolution
Duplicate reference	Mark/queue as possible duplicate; do not double-credit
Unmatched payment	Exception queue; ask for/seek authoritative evidence
Wrong account	Exception; do not silently re-map without evidence
Suspicious/uncertain	Escalate to Admin/Finance review

Finance Agent may perform deterministic matching and prepare a recommendation, but under the locked AgencyOS flow only the human Admin changes M2 to VERIFIED.

12. Admin Verification Package

- ☐ invoice ID / milestone ID.
- ☐ project / client.
- ☐ expected invoice amount and current balance.
- ☐ submitted payment amount.
- ☐ transaction/reference/UTR.
- ☐ payment method and receiving account.
- ☐ payment date/time.
- ☐ proof attachment.
- ☐ gateway/bank reconciliation evidence if available.
- ☐ duplicate-reference check result.
- ☐ exact/partial/over/under/unmatched classification.
- ☐ Finance Agent recommendation: MATCH / REVIEW / REJECT / EXCEPTION.
- ☐ no fabricated evidence

Admin verification decision must store verifier, timestamp, decision, reason and supporting evidence where applicable.

13. Locked Verification States

PAYMENT_PENDING → PAYMENT_SUBMITTED → PENDING_VERIFICATION → VERIFIED / REJECTED /

Only VERIFIED opens the M2 delivery/Phase 5 gate. PAYMENT_SUBMITTED and PENDING_VERIFICATION must remain financially closed.

14. Receipt / Payment Acknowledgement

- ☐ Generate final receipt only after Admin-verified payment according to configured policy.
- ☐ Receipt references payment ID, invoice, M2 milestone, client, amount, method, date, transaction reference and receiving account.
- ☐ Receipt number is unique and auditable.
- ☐ Unverified submission cannot produce a verified final receipt.
- ☐ Payment acknowledgement and receipt delivery state are recorded separately from payment verification.

15. Payment Reminder Responsibilities

- ☐ Upcoming due reminder where configured.
- ☐ Due-today reminder.
- ☐ Overdue reminder.
- ☐ Escalation reminder according to policy.
- ☐ Payment-submitted acknowledgement without claiming verification.
- ☐ Verified-payment acknowledgement.
- ☐ Stop full-payment reminders after verified balance reaches zero.
- ☐ Reminder references correct invoice and M2 milestone.
- ☐ WhatsApp/email/notification delivery failure is tracked and retryable.
- ☐ Reminder retry must not alter financial state.

16. Exceptions & Escalations

Exception	Required action
Invoice already exists for same M2	Do not duplicate; return existing financial record
Billing profile incomplete	Create clarification/manual task
Tax mode uncertain	Admin/Finance review; no guessed tax
Payment proof without transaction reference	PENDING_VERIFICATION / exception
Duplicate UTR/reference	Flag duplicate and prevent double credit
Wrong amount	Partial/under/over exception
Wrong receiving account	Exception queue; evidence review
Gateway/bank mismatch	Keep unverified; reconcile
Refund/chargeback	Controlled separate financial workflow
Waiver/write-off request	Admin-controlled exception; Finance Agent cannot self-approve

17. Phase 5 Financial Gate

- ☐ Phase4Completed alone does not open Phase 5.
- ☐ InvoiceIssued does not open Phase 5.
- ☐ PaymentSubmitted does not open Phase 5.
- ☐ ProofUploaded does not open Phase 5.
- ☐ FinanceAgentMatchRecommended does not open Phase 5.
- ☐ Only Admin-confirmed M2PaymentVerified opens the financial gate.
- ☐ Orchestrator emits/consumes the gate event but does not become financial authority.
- ☐ PM Task 3 announcement can run only after the verified-gate event

This gate must be enforced server-side/workflow-side, not only by hiding a button in the Admin Panel.

18. Finance Agent Must NOT

- ☐ Must not mark payment verified from a client message.
- ☐ Must not mark payment verified from a screenshot alone.
- ☐ Must not self-approve the Admin verification gate.
- ☐ Must not guess GST/tax treatment.
- ☐ Must not alter an issued invoice silently.
- ☐ Must not issue duplicate M2 invoices on event replay.
- ☐ Must not invent discounts/waivers/refunds.
- ☐ Must not expose bank/gateway/API secrets.
- ☐ Must not rewrite financial history to force reconciliation.
- ☐ Must not open Phase 5 before M2PaymentVerified.
- ☐ Must not silently ignore underpayment/overpayment/duplicate/unmatched cases.

19. Admin Panel - Phase 4 Finance Visibility

Admin surface	Must show
M2 Overview	milestone %, amount, trigger, status, due date, balance, Phase 5 gate
Invoice	exact invoice, line items, tax mode, payment instructions, issue/due dates
Payment Submission	amount, method, UTR/ref, payer, proof, receiving account, submitted time
Verification Queue	Finance match result, exceptions, duplicate check, evidence, Admin VERIFY/REJECT
Receipt	issued receipt and delivery status after verification
Reminders	scheduled/sent/failed/retried history
Exceptions	under/over/duplicate/unmatched/tax/refund/waiver cases
Project Finance View	contract value, 30/20/30/20 schedule, invoices, payments, outstanding
Audit	invoice creation, submissions, Admin verification, adjustments, gate open

20. Finance Agent Data Contracts

Entity	Minimum Phase 4 fields
FinancialMilestone	id, project, sequence M2, percentage/amount, trigger, status, invoice_id, payment_status, gate_status
Invoice	id/number, project/client, milestone_id, commercial_baseline_version, tax_profile_version, subtotal/tax/total, balance, issue/due dates, status
PaymentInstructionSnapshot	invoice_id, receiving account/version, method, masked details/QR reference, effective snapshot
PaymentSubmission	id, invoice/milestone, amount, method, reference/UTR, payer, date/time, receiving account, proof, submitter, status
PaymentMatchResult	submission_id, match type, expected vs submitted, reference/account checks, duplicate check, recommendation
PaymentVerification	submission/payment id, Admin verifier, decision, amount verified, reason, evidence, timestamp
Receipt	receipt number, payment/invoice/milestone, amount, method, transaction ref, issue history
FinanceException	type, entity refs, owner, status, reason, evidence, resolution
PaymentReminder	invoice/milestone, reminder type, channel, schedule, delivery result
AuditEvent	actor, role, action, entity, previous/new value, reason, timestamp, linked document

21. Event Contract

Event	Finance Agent behavior
Phase4Completed	Idempotently evaluate/create M2 and invoice workflow
M2ReadyForInvoice	Build/issue exact milestone invoice
M2InvoiceIssued	Start payment-pending/reminder workflow
PaymentSubmitted	Run matching/pre-verification checks
PaymentMatchPrepared	Create/update Admin verification queue
AdminPaymentVerified	Record verified financial completion; issue receipt; publish M2PaymentVerified
AdminPaymentRejected	Keep gate closed; record reason and next action
PaymentPartiallyVerified	Update verified amount/balance; gate remains closed unless balance policy says otherwise
M2PaymentVerified	Publish financial gate-open event to Orchestrator/PM
Refund/Chargeback event	Route to controlled exception workflow

22. Idempotency & Reliability

- ☐ Phase4Completed has one deterministic M2 milestone identity per project/commercial baseline.
- ☐ Invoice generation uses unique constraints/idempotency keys.
- ☐ Message/reminder retry cannot create another invoice.
- ☐ Duplicate PaymentSubmitted webhook/event cannot double-credit money.
- ☐ Same UTR/reference is checked for duplication.
- ☐ Admin verification action is safe against double-click/replay.
- ☐ Receipt generation is idempotent.
- ☐ Worker/provider failures leave durable retryable state.
- ☐ Financial state transition and communication delivery state are separated.

23. Security & Permission Boundaries

- ☐ Finance Agent can prepare financial records within authorized project/tenant scope.
- ☐ Final M2 payment verification is Admin-only in the locked flow.
- ☐ Payment account configuration is restricted by role.
- ☐ Bank/UPI/gateway secrets are masked from ordinary logs/client-facing text.
- ☐ Production credentials are separated from development/test.
- ☐ Cross-project and cross-entity invoice/payment mapping is blocked.
- ☐ Refund/waiver/write-off/override requires controlled authority.
- ☐ Audit trail is append-oriented and not ordinarily editable by agents.
- ☐ Sensitive financial reads/actions are auditable.

24. Cost & Automation Rules

- ☐ Use deterministic code for percentages, taxes, balances, due calculations, matching rules and duplicate checks.
- ☐ Use AI only for appropriate document/message interpretation or exception summarization, not arithmetic truth.
- ☐ Reuse accepted commercial baseline instead of re-parsing client chat.
- ☐ Do not regenerate invoice documents on simple message retry.
- ☐ Keep reminders/template rendering separate from financial source-of-truth state.
- ☐ Track Finance Agent/model/tool usage where AgencyOS telemetry supports it.

25. Failure & Recovery

Failure	Required behavior
Phase4Completed replay	Return/reuse existing M2/invoice path
Invoice PDF/document generation failure	Persist invoice data; retry document generation; no duplicate invoice number
WhatsApp/email invoice delivery failure	Invoice remains issued; delivery is retryable
Payment gateway/bank integration unavailable	Keep submission pending/manual-review capable
Proof upload failure	Submission not falsely complete; retry upload
Duplicate UTR	Exception/duplicate state; no double credit
Admin verification endpoint retry	Idempotent decision; one financial result
Receipt delivery failure	Payment remains verified; receipt delivery retries independently
Worker crash	Resume from durable state without duplicate money movement records

26. Technical Implementation Plan

FIN4-I01 Existing Finance Discovery

Inspect current finance agent/domain, accepted quote baseline, milestone plan, invoice generation, tax profiles, receiving accounts, payment submissions, Admin verification, reminders, audit and Phase 5 gate.

FIN4-I02 M2 Activation Guard

Implement idempotent Phase4Completed → M2 READY_FOR_INVOICE flow using the locked 20% milestone.

FIN4-I03 Commercial Baseline Loader

Bind M2 to exact accepted quote/commercial version and project milestone schedule.

FIN4-I04 Invoice Engine

Generate GST/Non-GST M2 invoice deterministically with configured numbering/tax/payment snapshots.

FIN4-I05 Invoice Delivery

Integrate official client channels with delivery history/retry independent of invoice state.

FIN4-I06 Payment Submission

Capture payment amount/method/reference/payer/date/account/proof with PENDING_VERIFICATION.

FIN4-I07 Matching Engine

Implement exact/partial/under/over/unmatched/duplicate classification and reconciliation evidence where available.

FIN4-I08 Admin Verification Queue

Build verification package and human VERIFY/REJECT/PARTIAL decision surface.

FIN4-I09 Verified Payment Effects

On Admin verification: update balances, milestone status, receipt, audit and M2PaymentVerified event.

FIN4-I10 Phase 5 Gate

Enforce server-side that only M2PaymentVerified opens Task 3 / Phase 5 financial gate.

FIN4-I11 Reminder Engine

Due/overdue/submitted/verified communication with stop conditions and retry.

FIN4-I12 Exception Workflow

Handle tax ambiguity, wrong amount/account, duplicate, unmatched, refund/waiver/chargeback cases.

FIN4-I13 Admin Panel

Expose M2, invoice, submissions, verification queue, exceptions, receipt, reminders and audit.

FIN4-I14 Security / RLS

Harden project/tenant/entity scope, payment account access, secrets and Admin-only verification.

FIN4-I15 Idempotency / Recovery

Prevent duplicate M2/invoices/payments/receipts and support worker/provider retry.

FIN4-I16 Automated Tests

Unit/integration/event/security/financial-gate coverage.

FIN4-I17 E2E / Regression

Run Phase 4 complete → M2 → Admin verification → Phase 5 gate flow and regression against earlier finance milestones.

27. Finance Agent Test Matrix

Area	Required coverage
Activation	valid Phase4Completed, incomplete Phase 4, duplicate completion event
Commercial baseline	accepted quote version, wrong/stale baseline, milestone 20% calculation
Tax	GST/Non-GST configuration, deterministic tax, missing tax profile
Invoice	unique numbering, totals, due date, payment snapshot, no duplicate invoice
Delivery	WhatsApp/email success/failure/retry without duplicate invoice
Submission	amount/method/UTR/account/proof capture, duplicate webhook/event
Matching	exact, partial, under, over, unmatched, duplicate, wrong account
Admin verification	verify/reject/partial, unauthorized actor, double-click/replay
Receipt	only after verified payment; idempotent generation
Reminders	upcoming/due/overdue/stop after full verified payment
Phase 5 gate	closed on proof/submission/recommendation; open only after Admin verify
Security	cross-tenant/project/entity denial, secrets masked
Recovery	document delivery failure, integration outage, worker crash, retry
Audit	all sensitive changes and decisions preserved
Regression	M1/M3/M4 shared financial infrastructure not broken

28. Mandatory Detailed Test Cases

ID	Scenario	Expected result
FIN4-T001	Valid Phase4Completed event	Create/activate exactly one M2 milestone
FIN4-T002	Phase 4 not complete	M2 activation blocked
FIN4-T003	Replay Phase4Completed	No duplicate M2 or invoice
FIN4-T004	Project value 100,000 with locked M2 20%	Base M2 amount = 20,000 before configured tax treatment
FIN4-T005	Accepted commercial baseline missing	Block invoice; clarification/manual action
FIN4-T006	GST mode configured	Tax calculated by configured deterministic rules
FIN4-T007	Tax mode uncertain	No guessed tax; Admin/Finance review
FIN4-T008	Invoice issued	Unique invoice number + exact milestone/baseline refs
FIN4-T009	Invoice delivery fails	Invoice remains issued; communication retryable
FIN4-T010	Payment proof uploaded without UTR/reference	PENDING_VERIFICATION / exception
FIN4-T011	Client says 'paid' in WhatsApp	No verification
FIN4-T012	Screenshot uploaded	No automatic verification
FIN4-T013	Exact amount/reference/account match	Prepare Admin verification recommendation
FIN4-T014	Underpayment	Partial/underpayment state; gate closed
FIN4-T015	Overpayment	Exception; no silent full-credit resolution
FIN4-T016	Duplicate UTR/reference	Duplicate flag; no double credit
FIN4-T017	Wrong receiving account	Exception; gate closed
FIN4-T018	Unmatched transaction	Exception queue
FIN4-T019	Finance Agent attempts final VERIFY	Denied by locked Admin-only gate
FIN4-T020	Unauthorized user attempts VERIFY	Denied
FIN4-T021	Admin rejects payment	Gate closed; reason recorded
FIN4-T022	Admin verifies exact payment	Invoice/milestone verified; receipt eligible

ID	Scenario	Expected result
FIN4-T023	Admin double-clicks VERIFY	Idempotent one verification
FIN4-T024	Receipt generation after verified payment	One auditable receipt
FIN4-T025	Receipt requested for unverified payment	Blocked
FIN4-T026	Phase 5 start after invoice only	Blocked
FIN4-T027	Phase 5 start after PaymentSubmitted	Blocked
FIN4-T028	Phase 5 start after Finance match recommendation	Blocked
FIN4-T029	Phase 5 start after Admin M2PaymentVerified	Allowed
FIN4-T030	Reminder after fully verified payment	Not sent
FIN4-T031	Cross-project payment mapping	Denied/flagged
FIN4-T032	Cross-tenant finance access	Denied
FIN4-T033	Bank/gateway credential appears in client/log output	Security FAIL
FIN4-T034	Worker crash during invoice generation	Retry without duplicate invoice number
FIN4-T035	Payment event replay	No duplicate payment credit
FIN4-T036	Refund/waiver requested	Controlled exception; Finance Agent cannot self-approve

29. Mandatory Phase 4 Finance E2E Scenario

- ☐ Begin with a project whose Phase 4 final prototype is client-approved and Task 2 DoD is complete.
- ☐ Phase4Completed event fires once.
- ☐ Finance Agent loads exact accepted commercial baseline and locked M2 = 20%.
- ☐ Finance creates correct M2 invoice using configured GST/Non-GST profile and receiving account snapshot.
- ☐ Invoice/payment request is sent and delivery history recorded.
- ☐ Client submits payment with amount, UTR/reference and proof.
- ☐ Finance matching identifies an exact match and prepares Admin verification package.
- ☐ Before Admin verification, attempt Phase 5 start - confirm BLOCKED.
- ☐ Admin verifies payment.
- ☐ Finance updates verified balance, milestone state and receipt.
- ☐ M2PaymentVerified event opens financial gate.
- ☐ PM receives verified event and Task 3 / Phase 5 becomes eligible.
- ☐ Replay Phase4Completed and PaymentSubmitted events - verify no duplicate invoice/payment/receipt.
- ☐ All invoice/payment/verification/gate events remain visible in Admin audit history.

30. Negative / Exception E2E Scenarios

- ☐ Run underpayment and verify gate remains closed.
- ☐ Run duplicate UTR and verify no double credit.
- ☐ Run wrong-account submission and verify exception queue.
- ☐ Run invoice delivery failure and verify financial state is not duplicated.
- ☐ Run gateway/bank integration outage and verify manual/Admin review remains possible.
- ☐ Run tax-profile-missing case and verify no guessed invoice tax.
- ☐ Run unauthorized verification attempt and confirm denial/audit.

31. Definition of Done - Phase 4 Finance Agent

- ☐ Finance Agent activates only from valid Phase4Completed for M2.
- ☐ M2 = 20% is derived from accepted commercial baseline.
- ☐ No duplicate M2/invoice on replay.
- ☐ GST/Non-GST invoice mode is configuration-driven.
- ☐ Invoice/payment instructions use configured receiving-account snapshot.
- ☐ Payment submission captures reference/evidence without claiming verification.
- ☐ Exact/partial/under/over/unmatched/duplicate matching works.
- ☐ Admin receives complete verification package.
- ☐ Finance Agent cannot perform final Admin verification.
- ☐ Verified payment updates invoice/milestone balance correctly.
- ☐ Receipt is issued only according to verified-payment policy.
- ☐ Phase 5 stays blocked before M2PaymentVerified.
- ☐ Phase 5 opens only after Admin-verified M2.
- ☐ Reminder stop/retry rules work.
- ☐ Exceptions are controlled and auditable.
- ☐ Admin Panel exposes M2/invoice/payment/verification/receipt/gate state.
- ☐ Security, tenant/project isolation, secrets and audit controls pass.
- ☐ Idempotency/recovery tests pass.
- ☐ No unresolved Phase 4 Finance P0/P1 defects remain.

32. Master Finance Agent Checklist

A. Activation

- ☐ Phase4Completed
- ☐ M2 exists

- ☐ 20% baseline
- ☐ duplicate check
- ☐ commercial version

B. Billing

- ☐ billing profile
- ☐ GST/Non-GST
- ☐ tax config
- ☐ invoice number
- ☐ issue/due dates
- ☐ payment instructions

C. Invoice

- ☐ milestone link
- ☐ line item
- ☐ subtotal/tax/total
- ☐ balance
- ☐ status
- ☐ document/delivery history

D. Payment Submission

- ☐ amount
- ☐ method
- ☐ UTR/ref
- ☐ payer
- ☐ date
- ☐ account
- ☐ proof
- ☐ submitter
- ☐ pending verification

E. Matching

- ☐ exact
- ☐ partial
- ☐ under
- ☐ over
- ☐ duplicate
- ☐ unmatched
- ☐ wrong account
- ☐ recommendation

F. Admin Verification

- ☐ verification package
- ☐ Admin-only action
- ☐ reason/evidence
- ☐ idempotency
- ☐ audit

G. Receipt

- ☐ verified payment only
- ☐ unique receipt
- ☐ payment/invoice refs
- ☐ delivery history

H. Reminders

- ☐ upcoming
- ☐ due
- ☐ overdue
- ☐ submitted acknowledgement
- ☐ verified stop condition
- ☐ retry

I. Exceptions

- ☐ tax ambiguity
- ☐ wrong amount
- ☐ wrong account
- ☐ duplicate
- ☐ unmatched
- ☐ refund
- ☐ waiver
- ☐ chargeback

J. Phase 5 Gate

- ☐ closed on proof
- ☐ closed on submission
- ☐ closed on recommendation
- ☐ open only on M2PaymentVerified

K. Admin Panel

- ☐ milestone
- ☐ invoice
- ☐ submission
- ☐ verification queue
- ☐ receipt
- ☐ exceptions
- ☐ audit
- ☐ gate

L. Security

- ☐ RBAC
- ☐ tenant/project scope
- ☐ account protection
- ☐ secret masking
- ☐ Admin-only verification

M. Reliability

- ☐ idempotent milestone/invoice
- ☐ duplicate webhook protection
- ☐ worker retry
- ☐ receipt idempotency

N. Testing

- ☐ unit
- ☐ tax/calculation
- ☐ integration
- ☐ event/job
- ☐ security
- ☐ negative
- ☐ E2E

☐ regression

33. Final Locked Phase 4 Finance Flow

TASK 2 / PHASE 4 COMPLETE → FINANCE AGENT ACTIVATES M2 20% → LOAD ACCEPTED COMMERCIAL BASELINE
→ GST/NON-GST INVOICE → ISSUE + SEND → PAYMENT_PENDING → CLIENT PAYMENT SUBMISSION / PROOF →
FINANCE MATCHING → PENDING ADMIN VERIFICATION → ADMIN VERIFY / REJECT → IF VERIFIED: RECEIPT

Locked Finance principle: AgencyOS must always distinguish 'client says paid', 'proof submitted', 'Finance matched', and 'Admin verified'. Only the final Admin-verified state may unlock Phase 5.
