

AGENCYOS

Maintenance, Retention & Upsell System

Document 18 of the AgencyOS Master Documentation Set

MAINTENANCE PLANS • RENEWAL • CUSTOMER HEALTH • VIP DETECTION • UPSELL • REPEAT
PROJECTS • RETENTION

Purpose: Define the post-project commercial and relationship lifecycle that keeps clients supported, identifies risks early, creates legitimate expansion opportunities, and turns successful delivery into repeat business without confusing new work with included maintenance.

1. Core Principle

- Maintenance is a defined service, not an unlimited promise of free work.
- Retention is driven by successful delivery, responsiveness, reliability, transparency and ongoing value.
- Upsell must originate from genuine client needs, product opportunities or identified business value—not pressure or fabricated problems.
- New functionality is classified separately from bugs and included maintenance.
- Customer health must be explainable from recorded signals.
- VIP status is policy-based and should improve service quality, not bypass financial or security controls.
- Original completed projects remain historically closed; new work creates a controlled maintenance/change/new-project record.

2. End-to-End Post-Project Lifecycle

PROJECT COMPLETED → CUSTOMER SUCCESS → MAINTENANCE ELIGIBILITY → PLAN SELECTION → ONBOARDING → HEALTH MONITORING → SUPPORT/MAINTENANCE → RENEWAL → EXPANSION OPPORTUNITY → SALES → NEW QUOTE/PROJECT → REPEAT DELIVERY → CUSTOMER SUCCESS.

3. Maintenance Plans

- Define service tiers according to the agency's actual offerings.
- Each plan has scope, exclusions, response expectations, support channels, included hours/tasks where applicable, monitoring level, reporting and price.
- Plan versioning is required.
- Client acceptance references the exact plan/version.
- Do not promise unlimited revisions or development unless explicitly included.
- Maintenance can be monthly, quarterly, annual, prepaid or another configured model.

4. Maintenance Plan Components

- Plan name.
- Coverage period.
- Price/billing frequency.
- Included support.
- Included maintenance tasks.
- Bug-fix coverage.
- Minor-change allowance where applicable.
- Excluded work.
- Response targets.
- Support hours.
- Emergency policy.
- Monitoring.
- Reporting.
- Escalation.
- Renewal terms.

5. Maintenance Eligibility

- Project has reached COMPLETED state.
- Required handover is complete.
- Support/warranty status is known.
- Maintenance offering is compatible with the project.
- Technical ownership/access is sufficient.
- Client has accepted the maintenance commercial terms.
- Required payment/contract state is satisfied.

6. Warranty vs Maintenance vs New Work

- Warranty/support bug: defect in delivered scope covered by agreed terms.
- Maintenance: agreed operational upkeep, monitoring, minor fixes or defined changes.
- Change Request: new or materially changed functionality.
- New Project: separate substantial scope.
- Upsell: commercial opportunity generated from a legitimate client need.

7. Maintenance Request Lifecycle

CLIENT REQUEST → CLASSIFY → VERIFY CONTRACT COVERAGE → PRIORITIZE → ASSIGN
→ IMPLEMENT → QA → RELEASE → CLIENT CONFIRMATION → CLOSE.

- Out-of-scope work becomes a Change Request or commercial opportunity.
- Every request references the affected project/version.

8. Maintenance Ticket Types

- Production bug.
- Security/update task.
- Dependency update.
- Performance maintenance.
- Content/configuration change.
- Minor UI adjustment if included.
- Monitoring alert.
- Backup/recovery task where included.
- Access/admin support.
- New feature request.
- Integration change.
- Upgrade/migration.

9. Renewal System

- Track plan start/end dates.
- Define renewal window.
- Notify client before expiry.
- Show current plan and usage.
- Prepare renewal proposal.

- Capture acceptance.
- Generate next billing cycle/invoice.
- Activate renewed plan.
- Record lapse/cancellation reason.

10. Renewal States

ACTIVE → RENEWAL_APPROACHING → RENEWAL_PROPOSED → PENDING_CLIENT → RENEWED.

- Alternative outcomes: EXPIRED, CANCELLED, PAUSED, DECLINED, AT_RISK.
- Renewal cannot be silently assumed.

11. Renewal Forecasting

- Upcoming renewals.
- Days until expiry.
- Current plan.
- Payment history.
- Usage/consumption where available.
- Open issues.
- Customer health.
- Recent satisfaction.
- Expansion opportunities.
- Renewal likelihood should be explainable, not a black-box assertion.

12. Customer Health Model

- Customer health combines objective signals such as project satisfaction, support issues, payment behavior, product usage where available, responsiveness, renewal status, incident history and relationship activity.
- Each signal should have configurable weight.
- Health status: HEALTHY, STABLE, WATCH, AT_RISK or CRITICAL.
- Every health classification should expose its major contributing signals to authorized staff.

13. Suggested Health Signals

- Recent successful releases.
- Open critical support issues.
- Repeated unresolved issues.
- Client response delay.
- Positive feedback.
- Negative feedback/complaints.
- Payment overdue status.
- Maintenance usage.
- Renewal proximity.
- Product usage/adoption where available.
- Expansion conversations.
- Support volume.

- Contract/service changes.

14. Customer Health Actions

HEALTHY → normal engagement and value expansion.

STABLE → standard follow-up.

WATCH → proactive Customer Success check-in.

AT_RISK → escalation, issue resolution and recovery plan.

CRITICAL → management attention and retention plan.

15. VIP Detection

- VIP status is configurable by Admin policy.
- Possible factors: strategic account value, long-term relationship, high project volume, maintenance value, business importance, executive relationship or contractual tier.
- VIP status should not be based solely on an AI agent's subjective judgment.
- VIP clients can receive faster routing, dedicated Customer Success attention, enhanced reporting or priority support when contractually supported.
- VIP status does not bypass approvals, security, payment verification or policy gates.

16. VIP Account Record

- VIP tier.
- Reason/criteria.
- Effective date.
- Owner.
- Customer Success manager.
- Support priority.
- Renewal date.
- Account value fields where authorized.
- Strategic goals.
- Open risks.
- Expansion opportunities.
- Executive contacts where legitimately stored.

17. Upsell Opportunity Detection

- New feature repeatedly requested.
- Client has outgrown current system.
- New department/module need.
- Performance/scaling requirement.
- Additional integration.
- Automation opportunity.
- Maintenance needs beyond current plan.
- New platform/mobile/web requirement.
- Security/compliance improvement need.

- New business workflow discovered during support.
- Upsell signals must be grounded in actual client/project data.

18. Upsell Guardrails

- Do not invent a problem to create a sale.
- Do not deliberately degrade service to create urgency.
- Do not label a bug as a paid feature.
- Do not hide included maintenance.
- Do not pressure vulnerable clients.
- Do not send excessive promotional messages.
- Respect client communication preferences.
- Route qualified opportunities to Sales.
- Commercial terms require quote/approval workflow.

19. Repeat Project Detection

- Track previous project types.
- Track modules delivered.
- Track client business areas.
- Track unresolved future requirements.
- Track expansion conversations.
- Track project completion history.
- Identify clients with recurring development needs.
- Create structured opportunity records rather than relying on memory.

20. Customer 360 View

- Client/company profile.
- All projects.
- Completed projects.
- Active maintenance plans.
- Support tickets.
- Open change requests.
- Invoices/payment status.
- Renewals.
- Customer health.
- VIP status.
- Feedback.
- Approvals.
- Expansion opportunities.
- Communication history.
- Relevant account contacts.

21. Customer Success Workflow

Review account → check health → check open issues → check upcoming renewal → review client goals → identify value delivered → identify risks → identify legitimate opportunities → communicate next action → record outcome.

22. Customer Success Check-ins

- Post-handover check.
- Launch/adoption check.
- Support health check.
- Renewal check.
- Quarterly/periodic business review where appropriate.
- Major-release follow-up.
- Post-incident recovery check.
- Exact cadence is configurable by service model.

23. Value Reporting

- Delivered features.
- Released improvements.
- Resolved issues.
- Performance improvements.
- Usage/adoption metrics where available.
- Maintenance work completed.
- Upcoming recommendations.
- Open risks.
- Renewal/plan information.
- Reports should distinguish facts from recommendations.

24. Maintenance Usage Tracking

- Included hours/tasks used.
- Remaining allowance.
- Out-of-scope requests.
- Emergency support usage.
- Response/incident volume.
- Maintenance releases.
- Unused capacity.
- Usage period.
- Use this data to support renewal conversations, not to manufacture charges.

25. Maintenance Overages

- If the plan supports overages, define rate and approval rules.
- Warn client before configured threshold.
- Require approval where policy requires.
- Invoice only authorized overage.
- Track exact work performed.

- Do not silently convert requests into billable work.

26. Cancellation / Churn

- Record cancellation date.
- Reason.
- Plan.
- Open issues.
- Outstanding balance.
- Client feedback.
- Alternative offer if appropriate.
- Data/access handover requirements.
- Post-cancellation support period.
- Do not obstruct legitimate cancellation.

27. Churn Risk Detection

- Repeated unresolved support issues.
- Negative satisfaction.
- Long response delays.
- Reduced usage where measurable.
- Payment problems.
- Renewal approaching without engagement.
- Repeated complaints.
- Major unmet requirements.
- Risk score should trigger human-reviewable actions, not automatic manipulation.

28. Retention Recovery Plan

- Identify root issue.
- Assign owner.
- Set recovery actions.
- Set deadline.
- Communicate with client.
- Resolve technical/support issues.
- Offer appropriate plan adjustment if justified.
- Review health after intervention.
- Record outcome.

29. Customer Success → Sales Handoff

- Opportunity ID.
- Client need.
- Evidence/signals.
- Existing plan/project.
- Requested outcome.
- Estimated urgency.

- Relevant stakeholders.
- Known constraints.
- Suggested next action.
- Sales receives structured context rather than an unsupported AI-generated pitch.

30. New Opportunity Lifecycle

DETECTED → QUALIFIED → DISCOVERY → QUOTE → NEGOTIATION → ACCEPTED/LOST → NEW PROJECT/CHANGE REQUEST.

- Existing maintenance remains separate unless formally expanded.

31. Commercial Controls

- Discounts follow Admin policy.
- Upsell pricing follows quote workflow.
- Renewal price changes are versioned.
- VIP status does not authorize free work.
- Sales authority thresholds are enforced.
- Client acceptance is required before new commercial work begins.

32. Customer Communication Automation

- Maintenance renewal reminders.
- Service expiry warnings.
- Support updates.
- Health check-ins.
- Value reports.
- Major release announcements.
- Feedback requests.
- Opportunity outreach when appropriate.
- Frequency and channels are configurable.
- Respect opt-outs/preferences and avoid spam.

33. WhatsApp / Communication Integration

- Customer Success can use configured WhatsApp/email/portal channels.
- Formal renewals, quotes, invoices and approvals remain linked to structured AgencyOS records.
- Messages can reference project, maintenance plan, invoice or opportunity.
- Communication should not create an untracked commercial commitment.

34. AI Customer Success Agent

- Summarize account history.
- Identify health signals.
- Suggest follow-up actions.
- Prepare renewal summaries.
- Identify possible opportunities.

- Draft client-safe messages.
- Route issues.
- AI recommendations require policy-aware execution and human/admin review for sensitive commercial actions.

35. AI Guardrails

- Never fabricate client satisfaction.
- Never invent usage.
- Never claim a client is VIP without configured criteria.
- Never create fake urgency.
- Never promise discounts or free work without authority.
- Never classify new scope as maintenance to avoid approval.
- Never cancel/renew contracts without authorization.
- Never expose private account data.

36. Retention Dashboard

- Customer health distribution.
- At-risk accounts.
- VIP accounts.
- Upcoming renewals.
- Expired/cancelled plans.
- Open support issues.
- Maintenance utilization.
- Expansion opportunities.
- Repeat-project opportunities.
- Recent satisfaction.
- Churn reasons.
- Recovery-plan status.

37. Account Manager / Customer Success Ownership

- Every active maintenance/strategic account has an owner.
- Owner reviews health.
- Owner coordinates escalations.
- Owner manages renewal process.
- Owner coordinates Sales for expansion.
- Owner records client goals and outcomes.
- Ownership changes are audited.

38. SLA / Priority Routing

- Support priority derives from contract plan and configured rules.
- VIP can influence routing only where policy permits.
- Critical production incidents override ordinary commercial priority.
- Security incidents follow security escalation policy.
- Finance issues follow Finance workflow.

39. Post-Project Data & Memory

- Preserve project history.
- Preserve maintenance history.
- Preserve support outcomes.
- Preserve client preferences.
- Preserve renewal history.
- Preserve accepted commercial records.
- Preserve opportunity outcomes.
- Use this history to improve future project discovery and delivery.

40. Customer Success Metrics

- Renewal rate.
- Retention rate.
- Churn rate.
- Maintenance attachment rate.
- Expansion revenue.
- Repeat-project rate.
- Customer health movement.
- Support resolution time.
- Satisfaction.
- Renewal forecast accuracy.
- Upsell conversion.
- These metrics should be calculated from authoritative records.

41. Account-Level Reporting

- Current relationship status.
- Revenue/contract metrics where authorized.
- Maintenance plan.
- Usage.
- Support history.
- Health.
- VIP status.
- Renewal forecast.
- Expansion pipeline.
- Completed projects.
- Upcoming opportunities.

42. Admin Controls

- Create/edit maintenance plans.
- Set pricing and included scope.
- Configure renewal cadence.
- Configure health weights.

- Configure VIP criteria.
- Set communication limits.
- Set escalation rules.
- Approve exceptions.
- Control discounts.
- Manage retention workflows.
- Review churn/upsell analytics.
- Pause automation.

43. Customer Success Acceptance Criteria

- Maintenance plans are versioned.
- Warranty, maintenance, bug and new scope are distinct.
- Renewals are tracked and never silently assumed.
- Customer health is explainable.
- VIP detection uses configurable criteria.
- Upsell opportunities are evidence-based.
- Repeat projects can be identified.
- Customer 360 view exists.
- Support and maintenance usage are tracked.
- Churn risk can trigger recovery workflows.
- Sales handoff is structured.
- Commercial approvals remain enforced.
- Communication is configurable and respectful.
- AI cannot fabricate health, VIP status, usage or commercial authority.
- Completed projects remain historically separate from new work.

44. Final Architecture

PROJECT COMPLETED → CUSTOMER SUCCESS → MAINTENANCE PLAN → HEALTH MONITORING → SUPPORT/MAINTENANCE → RENEWAL → HEALTH REVIEW → OPPORTUNITY DETECTION → SALES → QUOTE/CHANGE REQUEST → NEW PROJECT → CUSTOMER SUCCESS

The Maintenance, Retention & Upsell System is the long-term relationship layer of AgencyOS. It turns successful project delivery into reliable support, measurable customer health, renewals and legitimate repeat business.

Key outcome: AgencyOS should always know which clients need attention, which contracts are approaching renewal, which customers are strategically important, what value has been delivered, which problems must be solved, and where a genuine next project may exist—without manufacturing urgency or bypassing commercial controls.
