

AGENCYOS

FINANCE AGENT

Phase 2 Responsibility + Cross-Phase Payment Milestone Contract

INVOICE • GST/NON-GST • PAYMENT TRACKING • ADMIN VERIFICATION • FINANCIAL GATES

Status	LOCKED FINANCE RESPONSIBILITY BASELINE
Primary Phase 2 Trigger	M1 - 30% Advance
Mandatory Project Milestones	M1 30% • M2 20% • M3 30% • M4 20%
Mandatory Trigger Points	Phase 2 • after Phase 4 • after Phase 5 • after Phase 6
Phase 7 Gate	Starts only after 100% project payment is completed/verified
Post-Phase 7	₹0/free-maintenance invoice if free maintenance was included → directly trigger Phase 8
Phase 8	Conditional finance triggers for maintenance renewal, new service/project, or chargeable new feature

This document focuses deeply on Finance Agent responsibilities while preserving the already-locked cross-phase finance lifecycle so Phase 2 implementation does not create a conflicting finance model.

1. Finance Agent Mission

The Finance Agent is AgencyOS's financial workflow controller. Its job is limited to invoices, billing mode, payment requests/status, payment evidence, Admin verification gates, milestone financial triggers, free-maintenance invoice handling, renewals and chargeable post-project work.

Core boundary: Finance Agent controls financial workflow and payment gates. It does not perform technical development, project planning, QA, deployment, or independently change commercial scope.

2. Locked Payment Structure

Milestone	Percentage	Mandatory trigger	Financial purpose
M1	30%	Phase 2	Advance payment / project kickoff gate
M2	20%	Immediately after Phase 4 completion	UI Prototype approval milestone
M3	30%	Immediately after Phase 5 completion	Full development completion milestone
M4	20%	Immediately after Phase 6 completion	Final testing/QA completion; opens 100% payment gate for Phase 7

Mandatory rule: these four Finance triggers are compulsory for the standard project payment structure. They are not optional 'only if needed' triggers.

Cumulative planned payment: after M1 = 30%, after M2 = 50%, after M3 = 80%, after M4 = 100%. Phase 7 may trigger only after the required 100% payment condition is satisfied.

3. Phase 2 Finance Start Condition

- ☐ Phase 1 has produced an accepted quotation/WON handoff.
- ☐ Phase 2 has started.
- ☐ PM has confirmed or obtained the client's GST vs Non-GST billing preference.
- ☐ Accepted quotation contains the project commercial total and milestone structure.
- ☐ Client/project identifiers are available.
- ☐ Finance has not already issued the same M1 invoice for the same project/milestone/idempotency key.

4. Phase 2 Finance Agent Responsibilities

4.1 Receive billing-mode confirmation

- ☐ Consume structured BillingModeConfirmed from PM/client workflow.
- ☐ Store GST or NON_GST as the project billing preference.
- ☐ Do not infer GST preference from old messages when explicit confirmation is required.

4.2 GST detail collection

- ☐ If GST is selected, determine which required billing fields are missing.
- ☐ Request missing information through PM Agent rather than duplicating client communication ownership.
- ☐ Validate required GST billing profile before issuing the GST invoice.
- ☐ Persist a versioned billing profile for later milestones.

4.3 Non-GST flow

- ☐ If Non-GST is selected, use configured non-GST invoice rules.
- ☐ Do not add GST merely because the agency has GST configuration.
- ☐ Preserve the client's confirmed billing preference for later milestone invoices unless legitimately changed.

4.4 M1 invoice generation

- ☐ Read accepted project amount from the approved quotation/commercial record.
- ☐ Calculate M1 = exactly 30% according to configured currency/rounding policy.
- ☐ Create a unique invoice linked to client, project, quotation and milestone.
- ☐ Record subtotal, applicable tax, total, issue date, due/payment instructions and invoice status.
- ☐ Prevent duplicate invoice creation on retries.

4.5 Invoice delivery

- ☐ Send/share the generated invoice to the client's approved email.
- ☐ Share/send it through the official project WhatsApp communication channel when available.
- ☐ Record channel-level delivery status and evidence.
- ☐ Retry failed delivery idempotently without creating a new invoice.

4.6 Payment tracking

- ☐ Track invoice as unpaid/payment pending until evidence/payment event arrives.
- ☐ Capture payment proof/reference/transaction details when submitted.
- ☐ Link payment evidence to the correct invoice and milestone.
- ☐ Payment screenshot/reference alone must not become VERIFIED.

4.7 Admin payment verification

- ☐ Create a structured Admin verification request.
- ☐ Show project, client, invoice, milestone, expected amount, claimed amount, payment reference and evidence.
- ☐ Wait for explicit Admin CONFIRM / REJECT / MISMATCH decision.
- ☐ Record Admin identity, timestamp, decision and evidence.
- ☐ Only CONFIRM may transition payment to VERIFIED/PAID.

4.8 Trigger PM after verified advance

- ☐ After M1 payment is Admin-verified, emit PaymentVerified/M1Paid.
- ☐ Notify/trigger PM that advance payment has been received and verified.
- ☐ Open the Phase 2 financial gate for project planning/kickoff workflow.
- ☐ Do not itself perform the PM kickoff.

5. GST vs Non-GST Decision Flow

CLIENT BILLING CONFIRMATION → GST? → YES: collect/validate GST billing details → generate GST invoice | NO: generate Non-GST invoice → deliver invoice → payment → Admin verification

- ☐ GST and Non-GST invoice templates/configurations must be separately testable.
- ☐ Billing data used on each issued invoice should be snapshotted/versioned for audit.
- ☐ If required GST data is invalid or incomplete, invoice issuance remains blocked.

6. Admin Verification Gate

Payment state	Meaning	May open next gate?
PAYMENT_PENDING	Invoice issued; no usable payment evidence yet	No
PAYMENT_SUBMITTED	Client/payment source supplied proof/reference	No
PENDING_VERIFICATION	Finance prepared Admin verification request	No
VERIFIED / PAID	Admin confirmed payment	Yes
REJECTED	Admin rejected claimed payment	No
MISMATCH	Amount/reference/problem requires resolution	No

Locked rule: Finance Agent can prepare and track verification, but the human Admin is the authority that confirms whether the payment has actually arrived for this workflow.

7. M1 Phase 2 End-to-End Finance Flow

BillingModeConfirmed → validate billing profile → calculate 30% → issue M1 invoice → email + WhatsApp delivery → PAYMENT_PENDING → client submits payment/proof → PENDING_VERIFICATION → Admin review → CONFIRM → VERIFIED/PAID → emit M1Paid → PM/Phase 2 financial gate opens

8. Mandatory Cross-Phase Finance Triggers

The Finance Agent is cross-phase. Phase 2 is only its first mandatory project trigger.

Trigger point	Invoice	What happens after verified payment
Phase 2	M1 = 30%	PM receives verified-advance signal; Phase 2 can proceed toward kickoff
Phase 4 completed	M2 = 20%	Finance records second mandatory milestone payment
Phase 5 completed	M3 = 30%	Finance records third mandatory milestone payment
Phase 6 completed	M4 = 20%	Finance records fourth mandatory milestone payment; project reaches required 100% payment
Before Phase 7	No new milestone; gate check	Phase 7 starts only when required 100% payment is complete/verified

Each milestone must use the same disciplined invoice → delivery → payment tracking → Admin verification pattern unless a later locked policy explicitly changes a specific milestone.

9. Phase 7 Completion → ₹0 Free-Maintenance Invoice

- ☐ When Phase 7 completes, check whether free maintenance/support was included for the client.
- ☐ If free maintenance applies, Finance Agent is triggered.
- ☐ Generate a maintenance invoice/document with ₹0 charges for the applicable free-maintenance period/service.
- ☐ Share the ₹0 invoice to client email and official project WhatsApp group.
- ☐ No payment collection is required.
- ☐ No Admin payment verification is required because payable amount is ₹0.
- ☐ After successful issuance/sharing, directly trigger/allow Phase 8 Customer Success + Maintenance workflow.
- ☐ Record the free-maintenance entitlement/period so later renewal logic knows when it ends.

10. Phase 8 Conditional Finance Triggers

Unlike the four mandatory project milestones, Phase 8 Finance activation is conditional.

- ☐ Client renews maintenance after the free-maintenance entitlement ends.
- ☐ Finance generates the appropriate invoice/payment request according to approved commercial terms.
- ☐ Chargeable work must not silently start merely because Finance was triggered; applicable scope/approval/payment gates still apply.
- ☐ Phase 8 can continue long-term; Finance activates only on relevant financial events.

11. Finance Agent Must NOT Do

- ☐ Must not perform project management or client kickoff.
- ☐ Must not perform technical planning, coding, QA or deployment.
- ☐ Must not decide or invent project scope.
- ☐ Must not change quotation amount or milestone percentages without authorized commercial revision.
- ☐ Must not mark payment VERIFIED based only on a screenshot/message.
- ☐ Must not bypass Admin verification for payable milestone invoices.
- ☐ Must not generate duplicate invoices on job retry.
- ☐ Must not expose sensitive banking/payment credentials unnecessarily.
- ☐ Must not treat the ₹0 free-maintenance invoice as a payable invoice.
- ☐ Must not require Admin payment verification for the locked ₹0 post-Phase-7 invoice.
- ☐ Must not trigger Phase 7 before the required 100% payment gate passes.
- ☐ Must not expose internal AI provider/model/API details in client-facing finance communication.

12. Finance State Machines

Milestone invoice

PLANNED → READY_FOR_INVOICE → INVOICED → DELIVERED / DELIVERY_RETRY → PAYMENT_PENDING → PAYMENT_SUBMITTED → PENDING_VERIFICATION → VERIFIED/PAID | REJECTED/MISMATCH

Project payment progress

0% → M1 VERIFIED = 30% → M2 VERIFIED = 50% cumulative → M3 VERIFIED = 80% cumulative → M4 VERIFIED = 100% cumulative → PHASE7_FINANCE_GATE_OPEN

₹0 maintenance invoice

ELIGIBLE → ZERO_INVOICE_CREATED → DELIVERED → NO_PAYMENT_REQUIRED → PHASE8_TRIGGERED

13. Finance Events

Event	Producer	Consumer	Purpose
BillingModeConfirmed	PM/client flow	Finance	Start invoice preparation
GSTDetailsRequired	Finance	PM	Collect missing GST fields
MilestoneInvoiceIssued	Finance	Delivery jobs/PM	Record invoice
InvoiceDelivered	Email/WhatsApp job	Finance	Delivery evidence
PaymentSubmitted	Payment intake	Finance	Prepare verification
PaymentVerificationRequested	Finance	Admin	Human payment check
PaymentVerified	Admin/Finance	PM/Orchestrator	Open milestone gate
PaymentRejected/Mismatch	Admin/Finance	PM	Corrective client action
Phase4Completed	Phase 4	Finance	Mandatory M2 trigger
Phase5Completed	Phase 5	Finance	Mandatory M3 trigger
Phase6Completed	Phase 6	Finance	Mandatory M4 trigger
ProjectPaid100Percent	Finance	Phase 7 gate	Allow Phase 7
Phase7Completed	Phase 7	Finance	Evaluate ₹0 maintenance invoice
FreeMaintenanceActivated	Finance	Phase 8	Start Phase 8 without payment verification

Event	Producer	Consumer	Purpose
ChargeablePhase8Event	Phase 8	Finance	Conditional invoice/payment flow

14. Minimum Finance Data Model

Entity	Minimum fields
BillingProfile	client/project, GST mode, legal name, billing address/state, GSTIN if applicable, version
PaymentMilestone	project, M1-M4, percentage, trigger phase/event, expected amount, status, verified amount
Invoice	invoice number, project, client, milestone/type, billing snapshot, subtotal, tax, total, dates, status
InvoiceDelivery	invoice, channel, destination, attempt, status, provider ref, timestamp
Payment	invoice, amount, reference, proof/evidence, submitted_at, status, verified_by/at
VerificationRequest	payment, expected/claimed amount, evidence, admin decision, reason, timestamps
MaintenanceEntitlement	project/client, free/paid, start/end, status, renewal eligibility
FinanceGate	project, gate type, required amount/percent, achieved amount/percent, open/closed
AuditEvent	actor, action, entity, before/after, evidence, timestamp

15. Security, Permissions & Audit

- ☐ Finance Agent may generate invoices and payment-verification requests.
- ☐ Finance Agent may not impersonate Admin verification.
- ☐ Only authorized Admin role can perform the locked human payment confirmation.
- ☐ Invoice/payment records must be tenant/client/project isolated.
- ☐ Banking/payment references and evidence use access-controlled storage.
- ☐ Every invoice issue, delivery, verification decision, correction and gate opening is auditable.
- ☐ Tax/billing configuration changes are privileged and audited.
- ☐ Secrets/API keys for payment providers are never stored in normal chat content.
- ☐ Client-facing invoice links/files should use appropriate access controls.
- ☐ Historical issued invoices remain immutable or corrected through explicit credit/reissue policy rather than silent mutation.

16. Failure & Exception Handling

Scenario	Required behavior
Missing billing mode	Block invoice; PM requests GST/Non-GST confirmation
Incomplete GST data	Block GST invoice; request only missing fields
Calculation/config error	Fail safely; no invoice sent; surface Admin/Finance exception
Duplicate trigger	Return existing milestone invoice/state via idempotency
Email delivery fails	Retry channel idempotently; retain same invoice
WhatsApp delivery fails	Retry/alternate approved communication path; retain same invoice
Payment proof but no bank receipt	PENDING_VERIFICATION; Admin decides
Amount mismatch	MISMATCH; gate remains closed
Admin rejects	REJECTED; reason stored; corrective flow
Partial payment	Track amount; do not treat full milestone as verified unless policy explicitly allows
Phase 7 attempted below 100%	Block transition; show unpaid/unverified milestone(s)
₹0 maintenance invoice	No payment or Admin verification; direct Phase 8 trigger after delivery
Phase 8 chargeable work	Create conditional finance workflow from approved commercial event

17. Implementation Plan - Finance Agent

FIN-I01 Existing Code Discovery

- ☐ Inspect quotation/milestone models, invoices, GST config, payment intake, Admin approvals, WhatsApp/email jobs, audit and phase events.
- ☐ Create requirement-to-code traceability matrix.

FIN-I02 Finance Domain Contracts

- ☐ Implement/confirm BillingProfile, PaymentMilestone, Invoice, InvoiceDelivery, Payment, VerificationRequest, MaintenanceEntitlement and FinanceGate.
- ☐ Add unique/idempotency constraints.

FIN-I03 Tax/Billing Engine

- ☐ Implement explicit GST/NON_GST mode.
- ☐ Use deterministic configured calculations/rounding.
- ☐ Version billing snapshot used by each invoice.

FIN-I04 M1 Phase 2

- ☐ Consume BillingModeConfirmed.
- ☐ Validate billing profile.
- ☐ Calculate 30%.
- ☐ Issue unique invoice.
- ☐ Deliver email + WhatsApp.

FIN-I05 Payment Verification

- ☐ Capture evidence/reference.
- ☐ Create PENDING_VERIFICATION.
- ☐ Build Admin verification UI/action.

- ☐ Emit verified/rejected/mismatch events.

FIN-I06 Mandatory Milestone Engine

- ☐ Configure M1=30, M2=20, M3=30, M4=20.
- ☐ Bind mandatory triggers to Phase 2 / Phase4Completed / Phase5Completed / Phase6Completed.
- ☐ Track cumulative verified percentage.

FIN-I07 Phase 7 Gate

- ☐ Implement deterministic 100% verified-payment evaluator.
- ☐ Block Phase 7 when gate closed.
- ☐ Emit ProjectPaid100Percent when complete.

FIN-I08 Free Maintenance

- ☐ Consume Phase7Completed.
- ☐ Check entitlement.
- ☐ Generate ₹0 maintenance invoice/document.
- ☐ Deliver without payment/verification.
- ☐ Emit Phase 8 activation.

FIN-I09 Phase 8 Conditional Billing

- ☐ Handle maintenance renewal, new service/project and chargeable feature events.
- ☐ Reuse approved invoice/payment verification pipeline for payable work.

FIN-I10 Observability & Recovery

- ☐ Add audit, metrics, retries, dead-letter handling, duplicate protection and finance dashboard states.

FIN-I11 QA & Production Readiness

- ☐ Unit-test calculations/state transitions.
- ☐ Integration-test delivery/Admin verification/events.
- ☐ E2E-test all four milestones, 100% gate, ₹0 flow and Phase 8 conditional flows.

18. QA Test Matrix

Area	Required tests
GST mode	Valid GST; missing/invalid fields; configured tax/rounding
Non-GST	No GST; correct template/total
M1	30% exact; invoice uniqueness; retry idempotency
M2	20% mandatory trigger after Phase 4
M3	30% mandatory trigger after Phase 5
M4	20% mandatory trigger after Phase 6
Cumulative gate	30 → 50 → 80 → 100; Phase 7 blocked before 100
Delivery	Email/WhatsApp success, failure, retry, no duplicate invoice
Payment	Proof only, partial, mismatch, duplicate ref, reject, confirm
Admin authority	Only authorized Admin can verify
₹0 invoice	No payment, no verification, Phase 8 direct trigger
Phase 8 conditional	Renewal/new service/new project/chargeable feature
Security	Tenant isolation, secret handling, audit
Recovery	Duplicate phase event, worker crash, replay, dead-letter

19. Definition of Done - Finance Agent

- ☐ GST and Non-GST billing flows implemented.
- ☐ M1 30% Phase 2 flow implemented end-to-end.
- ☐ M2 20% mandatory post-Phase-4 trigger implemented.
- ☐ M3 30% mandatory post-Phase-5 trigger implemented.
- ☐ M4 20% mandatory post-Phase-6 trigger implemented.
- ☐ Cumulative verified payment reaches 100% only after all required payments.
- ☐ Phase 7 cannot start before the required 100% finance gate passes.
- ☐ Invoice email + WhatsApp delivery is tracked/idempotent.
- ☐ Payment evidence never auto-verifies a payable invoice.
- ☐ Admin verification gate is enforced and audited.
- ☐ PM receives verified-advance signal for Phase 2.
- ☐ Post-Phase-7 ₹0 free-maintenance invoice works without payment/verification.
- ☐ ₹0 invoice successfully triggers Phase 8.
- ☐ Phase 8 conditional finance triggers work for renewal/new service/new project/chargeable feature.
- ☐ Permissions, isolation, recovery and negative tests pass.
- ☐ No unresolved P0/P1 Finance workflow defects remain.

20. Master Finance Checklist

A. Core

- ☐ Billing profile.
- ☐ GST mode.
- ☐ Non-GST mode.
- ☐ Invoice numbering.

- ☐ Tax/rounding config.
- ☐ Audit.

B. M1 Phase 2

- ☐ Billing confirmation.
- ☐ GST data loop.
- ☐ 30% calculation.
- ☐ Invoice.
- ☐ Email.
- ☐ WhatsApp.
- ☐ Payment evidence.
- ☐ Admin verification.
- ☐ M1Paid event.
- ☐ PM gate.

C. M2/M3/M4

- ☐ Phase4 trigger 20%.
- ☐ Phase5 trigger 30%.
- ☐ Phase6 trigger 20%.
- ☐ Each invoice unique.
- ☐ Each payable milestone Admin-verified.

D. 100% Gate

- ☐ Cumulative calculation.
- ☐ Unpaid milestone visibility.
- ☐ Phase7 blocker.
- ☐ 100% event.

E. Free Maintenance

- ☐ Phase7 completion trigger.
- ☐ Entitlement check.
- ☐ ₹0 invoice.
- ☐ Email/WhatsApp.
- ☐ No payment.
- ☐ No verification.
- ☐ Phase8 direct trigger.

F. Phase 8

- ☐ Maintenance renewal.
- ☐ New service.
- ☐ New project/work.
- ☐ Chargeable feature.
- ☐ Approved commercial context.
- ☐ Payable verification pipeline.

G. Quality

- ☐ Unit tests.
- ☐ Integration tests.
- ☐ E2E four milestones.
- ☐ ₹0 E2E.

- ☐ Conditional Phase8 E2E.
- ☐ Permissions.
- ☐ Isolation.
- ☐ Idempotency.
- ☐ Retry/recovery.
- ☐ Audit.

21. Claude Code Execution Protocol

DISCOVER EXISTING FINANCE IMPLEMENTATION → MAP THIS PDF → IDENTIFY GAPS → PRESERVE WORKING FOUNDATIONS → IMPLEMENT ONE FINANCE UNIT → TEST → VERIFY → UPDATE CHECKLIST → NEXT UNIT → FULL CROSS-PHASE E2E → PRODUCTION READINESS

- ☐ Do not rewrite working Finance foundations unnecessarily.
- ☐ Use deterministic code/config for money, tax, percentages and gates; never rely on free-form LLM arithmetic as source of truth.
- ☐ Do not change locked 30/20/30/20 milestone percentages.
- ☐ Do not make post-Phase-4/5/6 triggers optional.
- ☐ Do not bypass Admin verification for payable milestone invoices.
- ☐ Do not require payment/Admin verification for the locked ₹0 maintenance invoice.
- ☐ Do not allow Phase 7 below the required 100% payment condition.
- ☐ Require test/evidence before marking any Finance requirement complete.
- ☐ Final implementation report must include migrations, changed files, finance calculations tested, manual settings, known limitations and production-readiness status.

22. Final Locked Finance Flow

PHASE 2 → GST/NON-GST → M1 30% INVOICE → EMAIL + WHATSAPP → PAYMENT → ADMIN VERIFY → PM/KICKOFF GATE → PHASE 4 COMPLETE → M2 20% → VERIFY → PHASE 5 COMPLETE → M3 30% → VERIFY → PHASE 6 COMPLETE → M4 20% → VERIFY → 100% PAID → PHASE 7 ALLOWED → PHASE 7 COMPLETE → ₹0 FREE-MAINTENANCE INVOICE → NO PAYMENT/NO VERIFICATION → PHASE 8 → CONDITIONAL FINANCE FOR RENEWAL / NEW SERVICE OR PROJECT / CHARGEABLE FEATURE

Locked Finance principle: Finance Agent owns financial workflow and gates only. Payable invoices require disciplined payment verification; the ₹0 free-maintenance invoice does not. The four project milestones are compulsory under the locked standard structure.
