

AGENCYOS

PHASE 2 - PM AGENT

Responsibilities, Workflow, Boundaries, Automation, Implementation & QA Specification

PRIMARY CLIENT-FACING OPERATIONAL OWNER FOR PHASE 2

Status	LOCKED PHASE 2 RESPONSIBILITY BASELINE
Role	Project Manager Agent
Phase	Phase 2 - Client Onboarding + Advance Payment + Official Project Kick-off
Works With	Finance Agent • Project Planning Agent • Orchestrator/Coordination • Admin
Human Gates	WhatsApp group manual creation/mapping • Admin payment verification • governed exceptions

This document is designed to be implementation-ready. It defines what the PM Agent owns, what it must never do, its triggers, state transitions, client communications, handoffs, exception paths, evidence and test requirements.

1. PM Agent Mission

The Phase 2 PM Agent is the digital equivalent of the agency's client-facing Project Manager. It becomes the primary operational communication owner after a valid Phase 1 WON handoff and remains responsible for guiding the client from onboarding into official project kickoff.

Core rule: PM owns communication, onboarding coordination, information collection, readiness and handoffs. PM does not become Finance, Development Planning, QA or Admin.

The PM should make the client experience feel simple: the client should not need to understand internal agents, AI providers, routing or technical orchestration. Internal work is coordinated behind the scenes while PM communicates only relevant project information.

2. PM Agent Phase 2 Start Condition

- ☐ Phase 1 lead/opportunity is legitimately marked WON.
- ☐ Accepted quotation/commercial context exists.
- ☐ Structured Phase 1 handoff event/payload is available.
- ☐ Project/client identifiers are valid.
- ☐ Phase 2 has not already been started for the same handoff/idempotency key.
- ☐ Orchestrator assigns or activates the PM Agent for the project.

3. PM Agent Inputs

- ☐ Client identity and contact details inherited from Phase 1.
- ☐ Lead/opportunity history and qualification context.
- ☐ Accepted quotation and commercial terms.
- ☐ Approved project scope and known requirements.
- ☐ Meeting notes/files/approvals already captured in Phase 1.
- ☐ Known project type, deliverables and client expectations.
- ☐ Known billing/contact information.
- ☐ Known client-side dependencies/assets already discussed.
- ☐ Existing communication preferences and participants.
- ☐ Policy/approval state relevant to Phase 2.

4. Primary Responsibilities

4.1 Context-first onboarding

- ☐ Load inherited Phase 1 context before contacting the client.
- ☐ Identify which onboarding fields are already confirmed.
- ☐ Create a structured missing-information list.
- ☐ Never ask the client to repeat already-confirmed information unless missing, conflicting, stale or explicitly requiring reconfirmation.

4.2 Client communication

- ☐ Act as the primary Phase 2 client-facing communication owner.
- ☐ Use short, simple, professional, non-technical messages.
- ☐ Ask one clear question/request at the appropriate time.
- ☐ Track unanswered requests and follow up according to policy.
- ☐ Never invent project progress, approvals, payment confirmation or technical status.

4.3 Onboarding information collection

- ☐ Collect only required missing business/project/contact information.
- ☐ Collect project references/assets/dependencies when Phase 2 requires them.
- ☐ Classify items as REQUIRED / OPTIONAL / RECEIVED / VERIFIED / WAITING_CLIENT / NOT_APPLICABLE.
- ☐ Route sensitive credentials to secure storage workflow instead of keeping secrets in ordinary chat notes.

4.4 WhatsApp project group setup coordination

- ☐ Create a manual-action task for Admin when the project WhatsApp group is required.
- ☐ Provide suggested group name, client members, default internal team members and project-specific member overrides.
- ☐ Wait for Admin confirmation/mapping before marking the group ready.
- ☐ Do not claim that PM itself created the WhatsApp group through an unsupported official API.

4.5 Finance coordination

- ☐ Ask client to confirm GST Invoice or Non-GST Invoice.
- ☐ Pass structured billing-mode confirmation to Finance Agent.
- ☐ If Finance reports missing GST billing details, request those details from the client in simple language.
- ☐ Do not calculate/issue the invoice as PM.
- ☐ Do not mark a payment VERIFIED.
- ☐ After Finance receives Admin verification, accept PaymentVerified event and proceed with the next operational step.

4.6 Project Planning coordination

- ☐ Trigger/request the Project Planning Agent at the appropriate verified-payment stage.
- ☐ Provide the Planning Agent with approved/inherited project context.
- ☐ Receive the operational project blueprint.
- ☐ If Planning finds ambiguity, PM asks the client for clarification and returns the structured answer.
- ☐ Do not independently create development-level coding plans.

4.7 Kickoff readiness and official kickoff

- ☐ Evaluate readiness only from structured backend state/evidence.
- ☐ Confirm required onboarding items, WhatsApp mapping if required, verified advance payment, planning readiness and policy approvals.

- ☐ Block kickoff when any mandatory gate is missing.
- ☐ Send official kickoff announcement only after readiness passes.
- ☐ Record kickoff evidence and complete Phase 2 handoff to Phase 3.

5. PM Agent Must NOT Do

- ☐ Must not generate or approve invoices as Finance Agent.
- ☐ Must not mark client payment VERIFIED.
- ☐ Must not bypass Admin payment verification.
- ☐ Must not manually alter finance gate state.
- ☐ Must not create technical architecture, database schema, API design or coding implementation plan.
- ☐ Must not perform development work.
- ☐ Must not perform QA testing.
- ☐ Must not silently change approved scope.
- ☐ Must not create fake approvals or client confirmations.
- ☐ Must not expose internal AI model/provider/API routing details to the client.
- ☐ Must not impersonate a named human who is not actually participating.
- ☐ Must not claim automatic WhatsApp group creation when unsupported.
- ☐ Must not advance Phase 2 merely because a message says something is complete; structured state/evidence is required.

6. Detailed PM Workflow

PM-01 - Receive WON Handoff

- ☐ Consume Phase1WonHandoffReady.
- ☐ Validate required project/client/quote references.
- ☐ If invalid, create remediation blocker instead of guessing.

PM-02 - Load Context

- ☐ Load all inherited structured context.
- ☐ Build known-vs-missing matrix.
- ☐ Create onboarding task state.

PM-03 - Initial Client Contact

- ☐ Send concise onboarding/welcome communication according to configured template.
- ☐ Do not re-ask known details.
- ☐ Request only the first set of missing required information.

PM-04 - Create WhatsApp Group Manual Action

- ☐ Create Admin task with project/client/member details.
- ☐ Attach configurable default internal team WhatsApp numbers.
- ☐ Allow project-specific member overrides.
- ☐ Track WAITING_ADMIN until mapped/confirmed.

PM-05 - Collect Missing Onboarding Data

- ☐ Process client replies into structured fields.
- ☐ Validate completeness.
- ☐ Create follow-up only for still-missing items.

PM-06 - Ask Billing Preference

- ☐ Ask GST or Non-GST.
- ☐ Store client response.
- ☐ Emit BillingModeConfirmed to Finance.

PM-07 - Support Finance Data Collection

- ☐ If GST details are missing, ask client for the fields Finance requires.
- ☐ Return structured data to Finance.
- ☐ Do not issue invoice.

PM-08 - Wait for M1 Payment Gate

- ☐ Finance issues M1 30% invoice.
- ☐ PM may communicate status but cannot verify payment.
- ☐ When client submits proof, Finance/Admin verification workflow runs.
- ☐ PM advances only on PaymentVerified.

PM-09 - Coordinate Project Planning

- ☐ Trigger/route to Project Planning Agent.
- ☐ Provide accepted scope/context.
- ☐ Resolve planning ambiguities through client clarification when necessary.

PM-10 - Readiness Evaluation

- ☐ Check structured onboarding readiness.
- ☐ Check WhatsApp group mapping if required.
- ☐ Check M1 VERIFIED.
- ☐ Check ProjectPlanReady.
- ☐ Check governed approvals/blockers.

PM-11 - Official Kickoff

- ☐ Send official project kickoff message.
- ☐ Record timestamp/channel/evidence.
- ☐ Set/trigger project ACTIVE according to policy.

PM-12 - Phase 2 Completion

- ☐ Mark PM Phase 2 tasks complete.
- ☐ Emit structured Phase2Completed/Phase3Ready handoff.
- ☐ Carry forward relevant context without client repetition.

7. WhatsApp Group Manual-Action Responsibility

The PM Agent coordinates this step; Admin performs the unsupported/manual real-world action.

PM responsibility	Admin responsibility	System responsibility
Create group-setup task	Open WhatsApp and create the project group	Store task/state/audit
Provide suggested group name	Add required client/internal members	Load default team-member configuration
Provide member list	Confirm actual group was created	Persist mapping/reference
Track blocker/status	Map/confirm group in AgencyOS	Notify PM with WhatsAppGroupMapped/Verified
Continue safe parallel onboarding	Resolve manual setup issue if any	Prevent duplicate manual-action tasks

One-click UX principle: AgencyOS may prepare/copy/open the setup context for Admin, but it must not label an unsupported manual operation as a successfully automated official WhatsApp group creation.

8. Default Team Member Handling

- ☐ Admin settings contain configurable internal WhatsApp team members.
- ☐ Each member has name, number, role, active/inactive status and optional project-type applicability.
- ☐ New project group task preloads active default members.
- ☐ PM/Admin can remove or add project-specific members before group creation.
- ☐ The member snapshot used for the actual group is stored for audit.
- ☐ Changing global defaults later must not silently rewrite historical project group membership.

9. PM ↔ Finance Agent Handoff Contract

Direction	Event/data	PM behavior
PM → Finance	BillingModeConfirmed	Send project/client/quote + GST/NON_GST
Finance → PM	GSTDetailsRequired	Ask client only for missing required fields
Finance → PM	InvoiceIssued	May inform client; do not duplicate invoice
Finance/Admin → PM	PaymentPendingVerification	Do not announce payment as verified
Finance → PM	PaymentVerified	Open PM's next operational step
Finance → PM	PaymentRejected/Mismatch	Communicate required corrective action

10. PM ↔ Project Planning Agent Contract

Direction	Payload	Expected behavior
PM → Planning	Approved scope + quote + requirements + onboarding context	Generate operational project blueprint
Planning → PM	ClarificationRequired	PM asks client in simple language
PM → Planning	ClarificationResolved	Resume plan generation/version
Planning → PM	ProjectPlanReady	PM uses readiness status; does not rewrite technical details

Project Planning in Phase 2 organizes the project at business/operational level. Detailed technical implementation planning remains a later development-phase responsibility.

11. PM State Model

ASSIGNED → CONTEXT_LOADING → ONBOARDING → WAITING_CLIENT / WAITING_ADMIN / WAITING_FINANCE / WAITING_PLANNING → PRE_KICKOFF_CHECK → KICKOFF_READY → KICKOFF_SENT → PHASE2_COMPLETE

A waiting state is not failure. PM should preserve the blocker, owner, required action and timestamps, while allowing safe independent work to continue.

12. PM Task/Evidence Model

- ☐ Every PM task has project_id, task_type, owner, status, priority, due/follow-up time and dependencies.
- ☐ Every client request records message template/version, channel, delivery status and response linkage.
- ☐ Every important confirmation stores source evidence.
- ☐ Every blocker stores blocker_type, owner, reason, created_at, last_follow_up_at and resolution evidence.
- ☐ Kickoff stores exact timestamp, channel and message evidence.
- ☐ Phase 2 completion stores handoff payload/version.

13. Client-Facing Message Rules

- ☐ Simple language; avoid internal system terminology.
- ☐ Do not mention AI providers/models/API routing.
- ☐ Do not expose internal prompts, agent reasoning or implementation details.
- ☐ Do not tell the client payment is verified before Admin verification.
- ☐ Do not promise unsupported WhatsApp automation.
- ☐ Do not overload the client with all missing items when staged collection is clearer.
- ☐ Use factual progress from backend state only.
- ☐ Keep tone professional, helpful and concise.

14. Suggested PM Communication Templates

Initial onboarding: “Your project onboarding has started. We already have the details confirmed during the sales process. If we need anything additional, I will request it here.”

Billing preference: “For billing, please confirm whether you need a GST invoice or a Non-GST invoice.”

GST details request: “Please share the required GST billing details so our finance team can prepare your invoice.”

Payment evidence received: “We have received your payment details. We are verifying them and will update you shortly.”

Payment verified / setup: “Your advance payment has been verified. We are completing the project setup now.”

Kickoff: “Your project setup is complete and we are officially starting the project now. We will keep you updated here as the work progresses.”

Templates should be configurable and localized; they are examples, not hard-coded mandatory wording.

15. Exceptions & Recovery

Scenario	PM action
Incomplete Phase 1 handoff	Create blocker/remediation; do not ask client blindly or invent scope
Client silent	WAITING_CLIENT + policy-based follow-up
Conflicting client answer	Flag conflict; request explicit clarification
WhatsApp group pending	WAITING_ADMIN; continue safe independent onboarding
GST data incomplete	Ask only missing Finance-required fields
Invoice delivery failed	Let Finance retry; PM does not create duplicate invoice
Payment proof submitted	Acknowledge receipt; wait for Admin verification
Payment mismatch/rejected	Communicate Finance/Admin corrective requirement
Planning ambiguity	Ask client concise clarification; return structured answer
Kickoff gate fails	Do not announce kickoff; surface missing gates
Job/message failure	Retry through job system; preserve idempotency/evidence

16. Permissions & Security

- ☐ PM has read access to approved project/sales context needed for onboarding.
- ☐ PM can create/update onboarding tasks and client communications.
- ☐ PM can request Admin manual actions.
- ☐ PM cannot set payment VERIFIED.
- ☐ PM cannot modify invoice totals/tax calculations outside approved Finance workflow.
- ☐ PM cannot access secrets beyond scoped operational need.
- ☐ PM actions are tenant/client/project scoped.
- ☐ All privileged state changes are audited.
- ☐ Sensitive client credentials must be passed to secure credential storage workflow.

17. Implementation Plan - PM Agent

PM-I01 Existing Code Discovery

- ☐ Find current PM/agent framework, Phase 1 handoff, project state, communications, tasks, approvals, finance events and audit.
- ☐ Create requirement-to-code gap matrix.

PM-I02 PM Domain Contract

- ☐ Define PM Phase 2 state enum, task types, blocker model, communication evidence and handoff payload.
- ☐ Add idempotency/transition guards.

PM-I03 Context Loader

- ☐ Load Phase 1 structured context.
- ☐ Build known/missing/conflicting field resolver.
- ☐ Test no-repeat behavior.

PM-I04 Onboarding Workflow

- ☐ Implement onboarding checklist/task engine.
- ☐ Implement staged client requests and response ingestion.
- ☐ Implement WAITING_CLIENT and follow-up logic.

PM-I05 WhatsApp Group Coordination

- ☐ Implement manual-action creation.
- ☐ Integrate default team member settings and project overrides.
- ☐ Consume group mapped/verified event.

PM-I06 Finance Coordination

- ☐ Implement billing preference request/response.
- ☐ Emit structured Finance handoff.
- ☐ Consume GSTDetailsRequired, InvoiceIssued, PaymentVerified and payment-exception events.

PM-I07 Planning Coordination

- ☐ Trigger Project Planning Agent after finance gate.
- ☐ Handle ClarificationRequired and ProjectPlanReady.

PM-I08 Kickoff Readiness

- ☐ Implement deterministic readiness evaluator.
- ☐ Block missing mandatory gates.
- ☐ Create kickoff action only after PASS.

PM-I09 Phase Completion

- ☐ Record kickoff evidence.
- ☐ Emit Phase2Completed/Phase3Ready.
- ☐ Carry context forward.

PM-I10 Observability & QA

- ☐ Add logs, metrics, audit and blocker visibility.
- ☐ Test retries, duplicate messages/events, permission boundaries and failure recovery.

18. PM Agent QA Test Matrix

Test area	Required coverage
Assignment	Valid handoff, duplicate handoff, missing identifiers
Context reuse	Known info not re-asked; missing requested; conflicts flagged
Onboarding	Required/optional states; staged requests; client reply ingestion
WhatsApp setup	Task created once; default members; overrides; mapped event
Finance handoff	GST/Non-GST; GST missing fields; no invoice authority
Payment gate	Proof does not unlock; Admin verified unlocks; rejection blocks
Planning	Correct trigger; clarification loop; ready event
Kickoff	All gates pass; each missing gate blocks; no duplicate kickoff
Communication	Correct channel, factual state, configurable template, delivery retry
Permissions	Cannot verify payment; cannot alter protected finance state
Isolation	No cross-client/project data leakage
Recovery	Worker crash, replay, duplicate event, message retry
Audit	Every important PM transition/evidence attributable

19. Definition of Done - PM Agent

- ☐ PM Agent starts only from valid Phase 2 handoff.
- ☐ PM loads Phase 1 context before client contact.
- ☐ Known information is not unnecessarily re-requested.
- ☐ Missing onboarding information is tracked structurally.
- ☐ WhatsApp group manual-action task is created and tracked.
- ☐ Default internal team numbers and project overrides are supported.
- ☐ PM asks and records GST/Non-GST preference.
- ☐ PM correctly hands billing to Finance.
- ☐ PM never verifies payment.
- ☐ PM advances only after PaymentVerified.
- ☐ PM coordinates Project Planning without doing technical development planning.
- ☐ Planning clarification loop works through PM/client.
- ☐ Kickoff readiness is deterministic and gate-driven.
- ☐ Official kickoff is sent only after readiness PASS.
- ☐ Kickoff evidence and Phase 3 handoff are stored.
- ☐ All PM actions are auditable and idempotent where required.
- ☐ Permissions, isolation, negative paths and recovery tests pass.
- ☐ No unresolved P0/P1 PM workflow defects remain.

20. Master PM Agent Checklist

A. Trigger & Context

- ☐ WON handoff consumed.
- ☐ PM assigned.
- ☐ Context loaded.

- ☐ Known/missing matrix.
- ☐ Duplicate start protected.

B. Onboarding

- ☐ Checklist created.
- ☐ Missing items requested.
- ☐ Responses structured.
- ☐ Follow-ups.
- ☐ Sensitive-data routing.

C. WhatsApp Group

- ☐ Manual task.
- ☐ Suggested name.
- ☐ Client members.
- ☐ Default team members.
- ☐ Overrides.
- ☐ Admin mapped event.
- ☐ Audit.

D. Finance Coordination

- ☐ Billing question.
- ☐ Billing response stored.
- ☐ Finance handoff.
- ☐ GST details loop.
- ☐ Invoice status consumed.
- ☐ Payment proof acknowledged.
- ☐ Verified event consumed.
- ☐ Rejected/mismatch path.

E. Planning

- ☐ Planning trigger.
- ☐ Context handoff.
- ☐ Clarification loop.
- ☐ Plan ready consumed.

F. Kickoff

- ☐ Readiness evaluator.
- ☐ All gates.
- ☐ Blockers.
- ☐ Kickoff message.
- ☐ Evidence.
- ☐ ACTIVE state.
- ☐ Phase2 complete.
- ☐ Phase3 handoff.

G. Quality

- ☐ Unit tests.
- ☐ Integration tests.
- ☐ E2E.

- ☐ Negative tests.
- ☐ Permissions.
- ☐ Isolation.
- ☐ Idempotency.
- ☐ Retry/recovery.
- ☐ Audit.
- ☐ No duplicate client messages.

21. Claude Code Execution Protocol

DISCOVER EXISTING PM IMPLEMENTATION → MAP THIS PDF → IDENTIFY GAPS → IMPLEMENT ONE SMALL UNIT → TEST → VERIFY → UPDATE CHECKLIST → NEXT UNIT → FULL PHASE 2 E2E → PRODUCTION READINESS

- ☐ Reuse existing working foundations instead of unnecessary rewrites.
- ☐ Preserve current AgencyOS event, permission, audit and multi-tenant conventions.
- ☐ Do not create a separate Onboarding Agent or Communication Agent.
- ☐ Do not give PM Finance/Admin authority.
- ☐ Do not invent unsupported WhatsApp group automation.
- ☐ Do not expose AI providers/models to clients.
- ☐ Require evidence/tests before marking a responsibility implemented.
- ☐ Final report must list changed files, migrations, tests, manual steps, known limitations and readiness status.

22. Final Locked PM Agent Flow

PHASE 1 WON → PM ASSIGNED → LOAD CONTEXT → DETECT MISSING INFO → CLIENT ONBOARDING → CREATE WHATSAPP GROUP MANUAL TASK → ADMIN CREATES/MAPS GROUP → ASK GST/NON-GST → FINANCE HANDOFF → SUPPORT BILLING DATA → M1 INVOICE/PAYMENT FLOW → WAIT FOR ADMIN-VERIFIED PAYMENT → PROJECT PLANNING HANDOFF → CLARIFICATION LOOP IF NEEDED → PROJECT PLAN READY → PRE-KICKOFF GATE → PM OFFICIAL KICKOFF → PHASE 2 COMPLETE → PHASE 3 READY

Locked PM principle: PM is the client-facing operational bridge. It communicates, collects, coordinates and gates the journey - while specialist technical/financial decisions stay with their responsible agents and human approvals.
